

SaniPod™ 

We're sorry it's taken  
so long...

SaniPod

## Convenient, clean and efficient

### A breakthrough design

SaniPod™ is a revolutionary design that sets new standards in how to deal with and dispose of sanitary towels. It suits every location and is available in both manual and automatic models.

### Discrete, stylish and unique

The slim-line, award-winning design saves space in the washroom and because it can be wall mounted, gets rid of the bins cluttering the floor, making general cleaning much faster and easier.

SaniPod™

## Smart and pleasant

### A smart solution to a sensitive problem

For women the world over, disposing of sanitary towels is a sensitive issue. SaniPod™ is a unique and revolutionary answer to this age old problem – one that is elegant, stylish, smart, simple to use and hygienic for companies that service washroom facilities. It is easier and faster to clean, install and operate, saving time, money and delivering happier clients.

### Easy and pleasant to use

The unique opening makes it simple to dispose of the sanitary towel without having to look into the unit. This is much more pleasant for the end user. It's also easy to post the sanitary towel into the unit as there's nothing to get in the way. The clean lines mean there is no waste getting trapped anywhere. The cylindrical form means the waste gets compacted down under its own weight.

### Wall mounted

One of the greatest advantages of the SaniPod™ is that it is wall mounted. This makes better use of limited space in washroom cubicles and makes it much easier to clean the cubicle and the unit itself if required. It also makes it look like a well-planned addition to the washroom – rather than just a bin stuck in the corner! As it's mounted on the wall, the unit can be placed at just the right height for easy access either while standing or sitting.

## Contemporary, elegant and hygienic

### A radical improvement

The sanitary bins usually plonked in the corner of a cubicle are often seen as unhygienic and, not surprisingly, women are often reluctant to use them. SaniPod™ changes all that. It introduces a radically different way of posting sanitary towels – one that is hygienic, discreet and elegant. It's also sophisticated, modern and stylish.

### A convenient size

The clever design of SaniPod™ neatly conceals a generous storage capacity of 12 litres, equivalent to a 20 litre bin. Full dimensions are shown below.

SaniPod™

## Manual or automatic

### SaniPod™ manual

For situations where touch-free technology isn't needed, the SaniPod™ manual model provides a stylish and exclusive alternative to the old-fashioned bins. The telescoping top has a lifting ring placed away from the opening where the waste goes. This minimises contact for the user and women find it much more pleasant than existing, manually operated sanitary units. The rotating cap allows posting from any angle and the wall mounting feature provides an innovative solution that can fit into any washroom.

### SaniPod™ automatic

The SaniPod™ auto delivers touch-free technology that works first time, every time. It means women won't have to touch the unit at all which is more hygienic and more pleasant, minimising the risk of cross-contamination and the spread of diseases. Silent operation ensures total discretion. The touch-free technology is installed in the wall bracket sensor box, protecting the electronics from cleaning materials, and reducing the risk of damage or misuse. This means the unit is reliable, safe, clean and convenient, which ensures less servicing and so delivers a cost-effective solution.

The sensor works on four D cell batteries which are good for 60,000 activations. Battery levels can easily be checked on the light indicator in the latch of the unit, which flickers red once batteries are low and twice when flat.

## Clever design saves space and time

### Get more in your vans

If you have to pick up the bins and take them away, you'll probably get 70 or so in a van. You can fit 144 of the SaniPod™ disposal units in the same space. This means your operatives can do twice as many visits before they have to return to base for a drop-off.

### Easy to transport

The SaniPod™ units are easy and convenient to transport, which speeds up your workforce. Customised trolleys ensure efficient servicing procedures and we can also provide customised racking for vehicles.

### Fast and efficient washing

Washing the SaniPods is a simple and efficient operation. A four minute automatic wash cycle includes: a three minute and 45 seconds wash at 60-65 degrees; a 15 second sanitising rinse at 87 degrees. Fifteen SaniPod™ bases are washed every four minutes and 20 lids are washed in each two minute cycle.

SaniPod™ 

## Unique solutions for service providers

### SaniPod™ liners

SaniPod™ liners fit precisely with no unsightly plastic over-wrap, maintaining the clean, stylish aesthetics of the SaniPod™ at all times. They are also easy to service, because when you remove the liner from the SaniPod™, the elasticated top self-closes, for minimal contact and greater efficiency.

### SaniPod™ liners and the environment

Both SaniPod™ manual and SaniPod™ automatic use strong oxo-biodegradable liners. Oxo-biodegradable plastics are conventional plastics but with an added proprietary mixture that accelerates the breakdown of the material's chemical structure. This is important for the environment because discarded SaniPod™ liners degrade into a form that can be safely absorbed into the ecosystem.
