Drinking Water Solutions

Quench

# Drinking water solutions

Everyone is health conscious these days.  So you want your staff, customers and visitors to have access to high quality drinking water - but you don't want any hassle.

## Introducing our Quench range of products

Quench drinking water dispensers produce a continuous flow of chilled, filtered water at a touch of a button.  As the dispensers are supplied directly from the mains water supply, there is no requirement for bottles.  The dispensers can be installed anywhere, provided that there is access to mains water.

In the event mains water is not available, our revolutionary 'bag in box' range of chillers are the perfect alternative solution.

## Providing the perfect service

At Quench, our dedicated team of qualified engineers can provide a complete nationwide service whilst ensuring you of the highest standards with the minimum disruption.

Quench are leaders in technology, and we're using it to make equipment maintenance and your life easier.

It's simple for you to track your last product service and identify the next one, for every serviceable product you carry. It's hassle free, and on-line.

All our service vehicles have trackers installed which allow us to estimate response times and give customers accurate times of service or repairs. We have a dedicated team of in house service engineers backed by a dedicated customer service department.

# Quench bag-in-box water dispensers

The next generation in water coolers has arrived, commercial bag-in-box coolers. More hygienic than conventional systems with elegant space efficient design.

A more hygienic system protecting the water from light pollution. The product is purity by design and is sealed for ultra hygiene and will reduce bacterial growth

Total microbial control renders old style water coolers obsolete. With bag-in-box water dispensers you have complete quality control from source to cup.

Bottles are also heavier than bag-in-boxes and be difficult to refill. The Quench bag-in-box system not only makes it easy to replace empty units but also stores three 15 litres of water and chills each unit. Empty units take up far less space than bottles and can be flat packed for recycling.

## Quench bag-in-box PRO

The stylish and sophisticated freestanding cooler for offices or staff rooms.

# Quench water boilers

## Wall mounted instant boiling water

Instant boiling water heaters are essential appliances for busy kitchens and are available in the widest range of models to suit every need.

## Save time, save energy, save money

Quench's zip patented high-precision temperature control systems are designed to keep the boiling water within one degree of boiling point.  This means boiling water, and only boiling water is delivered.

## Energy Conservation

Quench Hydroboil Plus has two programmable energy saving features.

The first feature - Integral 24 hour 7 day timer enables the unit to switch off automatically during known periods of inactivity e.g. overnight or at weekends, returning to full functionality ahead of the next expected demand.

The second feature - Sleep mode - 'inactivity sleep mode'. Following a period of 2 or 4 hours non-use The Quench Hydroboil Plus automatically enters sleep mode when the unit powers down allowing the water temperature to gradually reduce to 65˚C, at which it is maintained.

Alternately the 'low light sleep mode' is available.  An integral light detector automatically activates sleep mode (as above) when the room lights are switched off, returning to normal operation when the next draw off occurs or the lighting is switched back on.
